

# See what iTBlueprint and NetApp can do for your organization

Together with NetApp, we're empowering our customers to rethink their future, embrace the cloud, and get more out of their data with a foundation to store, manage, and protect it anywhere.

## So, what challenges are you facing?

At iTBlueprint, we work with organizations in a variety of industries – and although their challenges often vary, these are the ones we hear about consistently from a business and technical perspective.

### A large data footprint

With more unstructured data and large files like video, our storage and operations can't keep up.

### Workforce support

Our users can't access data and apps with the efficiency and speed they need to do their jobs.

### Data protection

We lack a DR plan or the ability to backup and recover data that's no longer just in our data center.

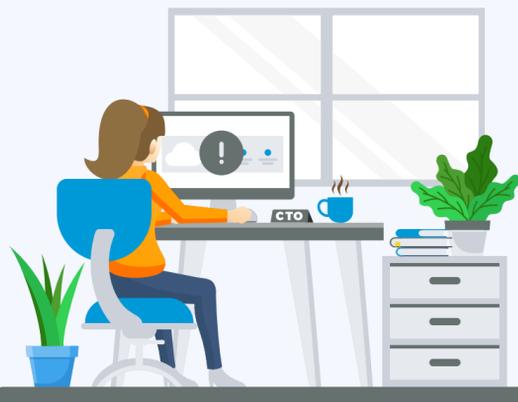

### Cloud strategy

It's hard to understand the cost of moving to the cloud and manage data across the clouds we're using.

If any of these are challenges in your organization...

**iTBlueprint can help you overcome them with proven technology from NetApp.**

## NetApp fuels transformation – from #CoreToCloud

By combining our cloud expertise and innovative mindset with NetApp's leading solutions, we're helping organizations like yours accomplish everything from improving operations to realizing greater value from their digital transformation.

### HYBRID ARRAYS

Perfect for backup and consolidation of general business applications.

- Powerful, cost-effective, and many use cases
- Simple data management and cloud integration
- Predictive analytics that reduce storage costs

### ALL FLASH ARRAYS

Bring amazing performance and reliability to your critical applications.

- Leading performance, scalability, and simplicity
- Provision storage faster with deep integration
- Connect to public clouds for data services you need

### ONTAP DATA MANAGEMENT SOFTWARE

Unify data management from your core data center to the cloud.

- Create a smart, powerful storage infrastructure
- Simplify backup and data protection
- Leverage built-in storage efficiency capabilities

### HYBRID CLOUD INFRASTRUCTURE

Create the right hybrid cloud for you, and make the move with ease.

- Enable the same data services in all your clouds
- One consistent experience across all environments
- Solutions for private, hybrid, and multi-cloud
