

Managed Security Services

Strengthening Your Security Posture

Businesses are under attack every day from malicious threats. Choosing to handle your security in-house, requires a large investment in manpower and technology. Plus as cyberattacks quickly evolve, it's almost impossible to keep up with evolving threats, address threats as they arise, and recover from incidents detected too late can consume substantial resources.

iTBlueprint Managed Security Services

Stopping attacks is only part of a strong security posture. Knowing your vulnerabilities is key to closing the gaps in your security before bad actors find and take advantage of them. iTBlueprint Managed Security Services provide you with the security expertise you require to not only keep up with opportunistic attacks but get ahead of them before they wreak havoc on your business.

Our experienced team will help you align your processes, people, and technology with your security, compliance and risk tolerance goals, to strengthen your cybersecurity posture from core to cloud.

Cyber Incident Response

Our team looks for anomalies that may compromise your network so you can quickly respond to cybersecurity incidents and protect your organization's integrity.

Firewall Management

Your first line of defense is stopping attacks from getting in. We provide 24/7 management and monitoring with our comprehensive managed firewall services, placing barriers between your data and hackers.

Security Information and Event Management (SIEM)

Get multi-layer threat protection with our combined Security Information and Event Management services and analyst intelligence.

Advanced Threat Protection

We take a holistic approach to your threat protection with antivirus and malware blockers paired with training your team on what to look out for so they can stop attacks before they get to your network.

Email Security

One of your greatest vulnerabilities is your email system. We scan all inbound and outbound emails for malicious threats, identifying and stopping suspect messages, and their attachments, before they do harm.

Data Loss Prevention (DLP)

Protect your intellectual property and improve your overall business security at the same time with expertly managed DLP services.

Identity and Access Management (IAM)

Secure and manage user access to applications from any device or location with our IAM services.

Log Management

We provide you with insights to easily manage your data, including audit records, audit trails, event logs, etc.

Network, OS Vulnerability Management

We search through your operating systems and network devices, as well as common misconfigurations, to uncover hiding malware, identify sensitive data and patch any holes to ensure you're in compliance.

Web Application Vulnerability Management

We provide a comprehensive listing of vulnerabilities that are aligned (but not limited to) the OWASP Top 10.

Patch Management

We ensure your network systems are up to date, reducing system failures, and increasing your productivity

Scheduled Penetration Test

We identify any possible entry points into your system and, using the latest hacker tools and techniques and report back our findings and recommendations for fixes.

PCI ASV Scanning

Enable you adhere to PCI DSS requirements with recommendations to manage any vulnerabilities and a proof-of-compliance report.
